

Tropical Storm Ingrid and Associated Impacts for the Rio Grande Valley

Friday, Sept. 13 4 PM CDT Update

The Latest on Ingrid

- Minimal Tropical Storm
- Forecast Winds to Increase to ~65 mph at Iandfall
- Core of Tropical Storm Force Winds "Tight"...
- ...but Strong Winds will Extend Well North Over Water
- Landfall Expected
 Sunday Evening (but
 Impacts Felt Well
 Beyond This Time)

What to Watch For

- Locally Heavy Rainfall
 - Event Total, inches (Through September 20):
 - 5 to 8 Lower Valley
 - 4 to 6 Mid/Upper Valley
 - 3 to 4 Ranchlands
 - Core Total (Sat Night-Tuesday)
 - 2 to 4 Lower Valley
 - 1 to 3 Mid/Upper Valley
 - 1 to 2 Ranchlands
- Tidal Run-up/Overwash/Flooding
 - Run-up to Dunes Early Saturday, at Low Tide Sunday-Monday
 - Run-up into Dunes at High Tide Sunday/Monday
 - Tides 1 to 2 feet above predicted levels inshore; 2 to 3+ feet above predicted levels onshore
 - Some Beach Erosion
- Surf/Currents
 - 8 to 10 foot breakers (Sat-Tue)
 - Very Dangerous Rip Currents

Potential Impact/Action

- Flooding Impact
 - Nuisance flooding of poor drainage locations guaranteed at some point through next week
 - Heavier/persistent bands could produce life/property threatening flooding in poor drainage locations or saturated areas
- Actions
 - Clear Canals, Ditches, Streets of Debris. Ensure Sewer Access.
 Have Pumps at the Ready
 - These actions completed by Saturday Afternoon.
 - Residents in known prone areas should consider moving property to higher levels inside and outside of homes
- Surf/Tide Actions
 - Poor/Average swimmers out of water, Saturday UFN
 - Seasoned Surfers Be Vigilant to Rips Saturday
 - Beach Property Owners: Move items to higher ground or behind sea wall
 - Bay Property Owners: Move items above prone areas

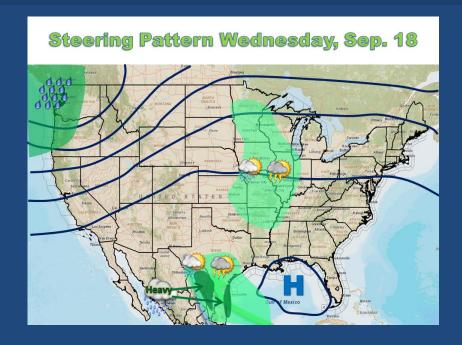

Tough Forecast?

Steering Pattern Monday, Sep. 16

Does the Ridge Hold Strong and "Shove" Ingrid West of Tampico, Reducing the Potential for Very Heavy Rainfall across the RGV?

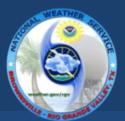

...Or Does It Leave a "Weakness" on it's back side, allowing very heavy rainfall to begin at landfall and continue through the 19th?

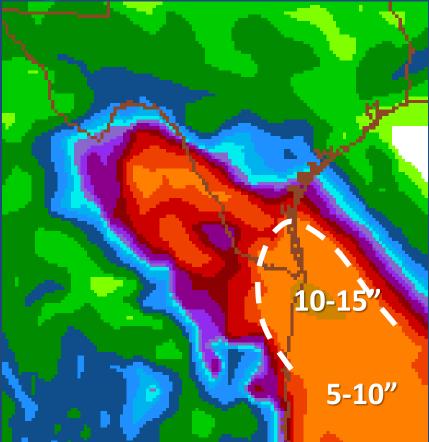

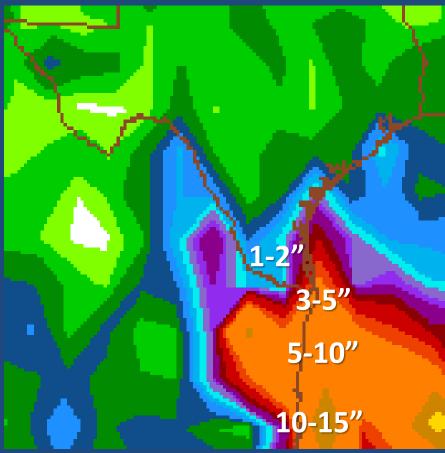

Subtle Difference, Huge Affect?

Thru Monday Evening at 7 PM

North American Mesoscale Model

Global Forecast System Model

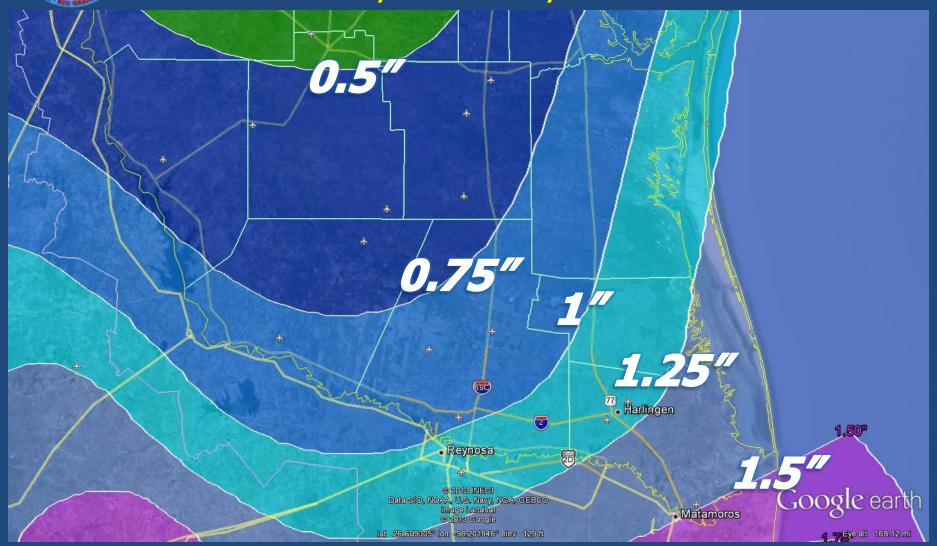

"Best Forecast" (Subject to Change)

Saturday 7 PM – Sunday 7 PM

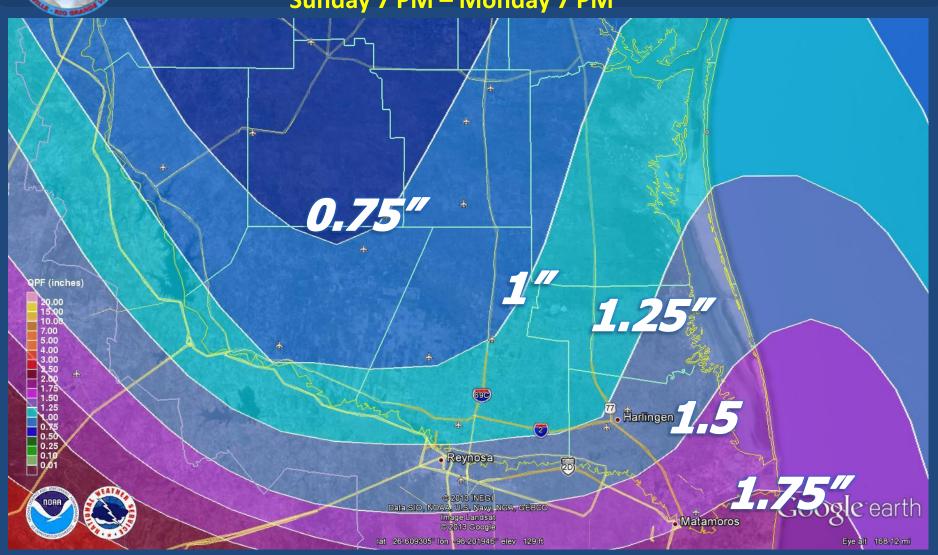

"Best Forecast" (Subject to Change)

Sunday 7 PM – Monday 7 PM

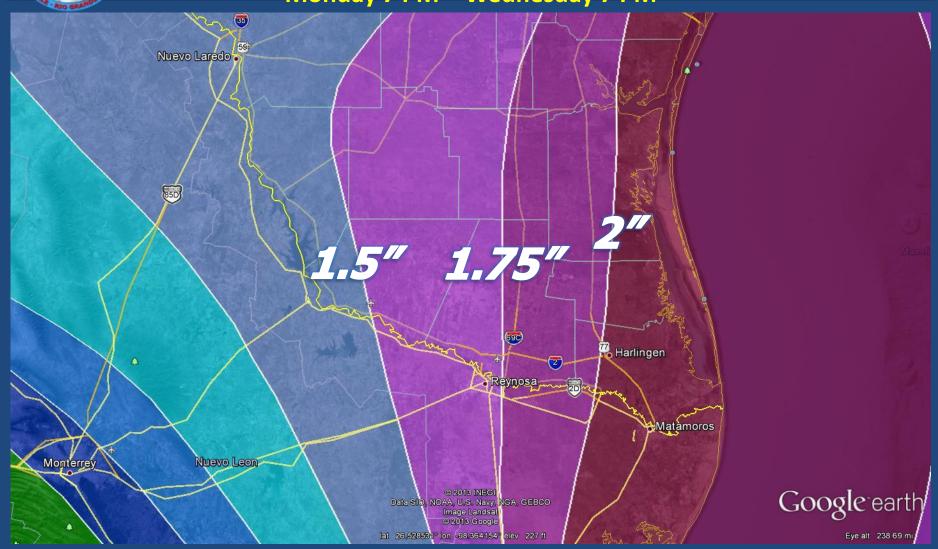

"Best Forecast" (Subject to Change)

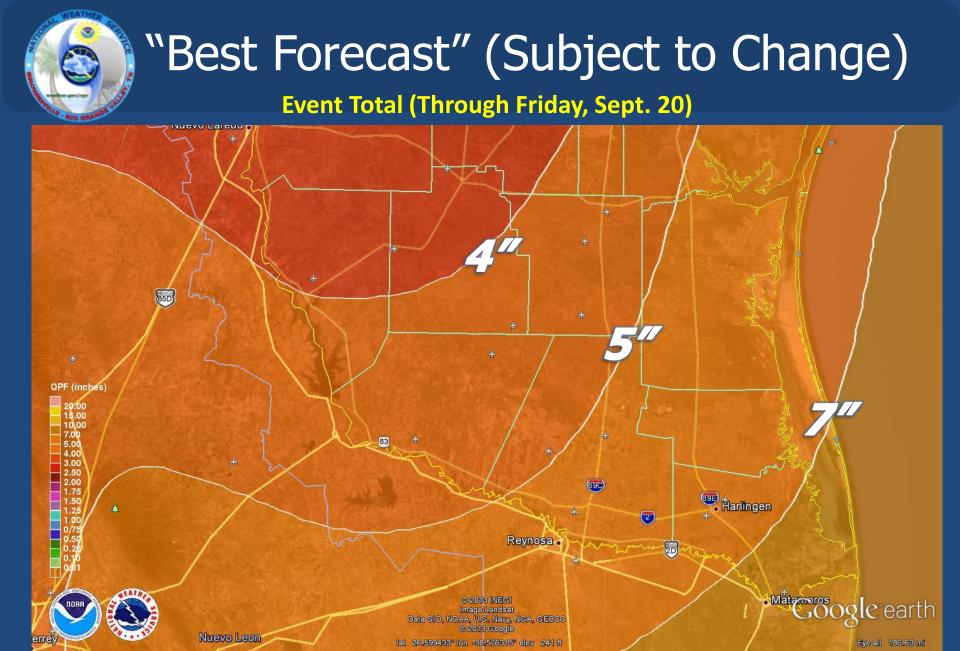

Monday 7 PM – Wednesday 7 PM

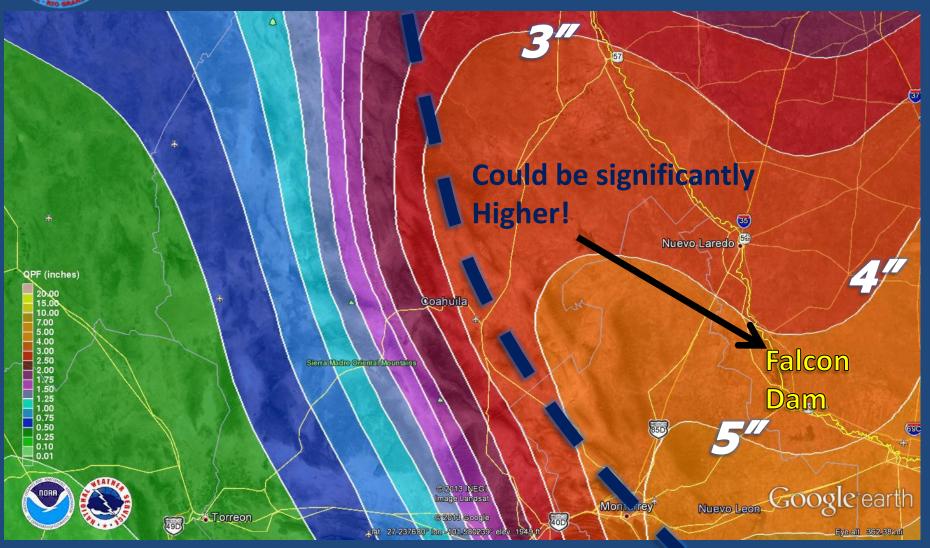

Saturday Morning?

Sunday/ Monday Morning?

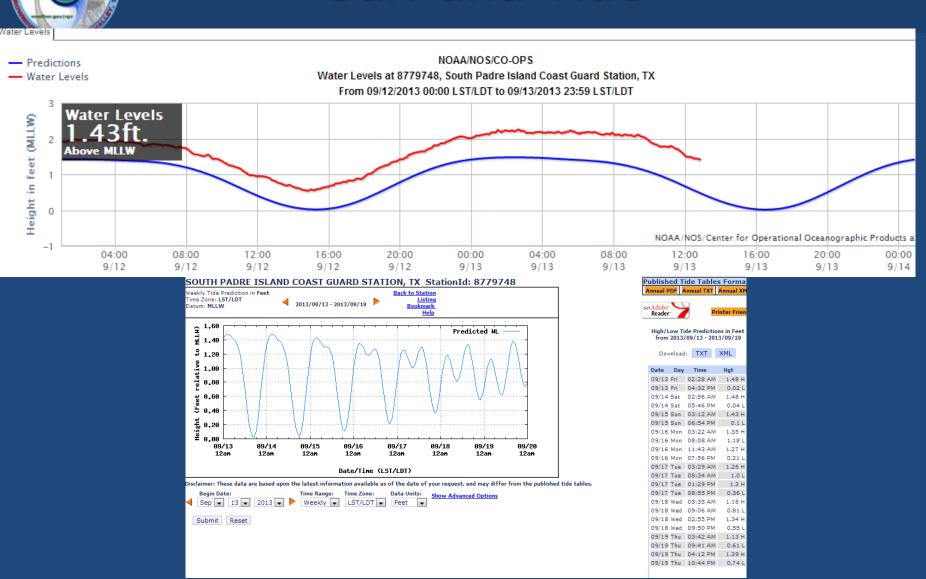

- Peaking 1 to 2 feet above predicted inshore
- Peaking 2 to 3+ feet onshore (beach)
- Monday Morning Worst...
- ...But Sunday not so great and high tides/rough surf hanging on Tuesday and Wednesday
- Bad week for vacation at SPI!!

Boating and Fishing

- Seas Rising to 10 to 14 feet by Monday
- Swell Period Likely to reach 10-12 seconds
- Winds: 25 to 30 knots Sunday-Tuesday
- Offshore Trips Should be Postponed Saturday Until Further Notice
- Inshore Trips Postponed Sunday-Tuesday, at least

Summary

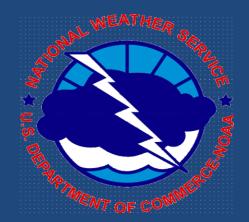

- Weather Goes Downhill Saturday night and continues through Wednesday
- Event will feature frequent "gusty" showers (winds up to 30-35 mph in gusts); when bands form, 1 to 2 inches in a couple hours possible
- Sunday-Tuesday Best Opportunity for Banding
- Tornadoes? Can't rule out isolated "spin ups"
 Monday Wednesday (Remember Arlene/Hidalgo, 2011)
- Forecast is tricky! Rainfall could be a few inches lower or several inches higher than forecast

Thank Youl
